## PLANNING & DEVELOPMENT SERVICES

# Statement of Reasons for Exemption from Additional Environmental Review and 15183 Checklist Pursuant to CEQA Guidelines §15183

**Date**: July 27, 2017

**Project Title**: Beebe Tentative Parcel Map

**Record ID:** PDS2015-TPM-21222, LOG NO. PDS2015-ER-15-02-003

Plan Area: Fallbrook Community Plan Area

**GP Designation**: Village Residential (VR-2) **Density:** 2 units per gross acre

**Zoning**: RR

Min. Lot Size: 0.5 acres

Special Area Reg.: C

Lot Size: 3.7 acres

**Applicant:** Scott and Cindy Beebe (760) 908-3899

Staff Contact: Marisa Smith - (858) 694-2621

marisa.smith@sdcounty.ca.gov

## **Project Description**

The project is a minor subdivision to divide a 3.7-acre property into two residential parcels. The project site is located at 893 Palomino Road in the Fallbrook Plan Area. Access to the site would be provided by a private easement that would connect to Palomino Road. Water would be provided by Fallbrook Public Utility District and each lot would utilize private septic systems. Earthwork will consist of 300 cubic yards of cut, 2,700 cubic yards of fill, and 2,400 cubic yards of imported soil.

The project site is subject to the Village General Plan Regional Category, Land Use Designation Village Residential. Zoning for the site is RR, Rural Residential. The project is consistent with density and lot size requirements of the General Plan and Zoning Ordinance.

#### Overview

California Public Resources Code section 21083.3 and California Environmental Quality Act (CEQA) Guidelines Section 15183 provide an exemption from additional environmental review for projects that are consistent with the development density established by existing zoning, community plan or general plan policies for which an Environmental Impact Report (EIR) was certified, except as might be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site. Section 15183 specifies that examination of environmental effects shall be limited to those effects that: (1) Are peculiar to the project or the parcel on which the project would be located,

and were not analyzed as significant effects in a prior EIR on the zoning action, general plan, or community plan, with which the project is consistent, (2) Are potentially significant off-site impacts and cumulative impacts which were not discussed in the prior EIR prepared for the general plan, community plan or zoning action, or (3) Are previously identified significant effects which, as a result of substantial new information which was not known at the time the EIR was certified, are determined to have a more severe adverse impact than discussed in the prior EIR. Section 15183(c) further specifies that if an impact is not peculiar to the parcel or to the proposed project, has been addressed as a significant effect in the prior EIR, or can be substantially mitigated by the imposition of uniformly applied development policies or standards, then an additional EIR need not be prepared for that project solely on the basis of that impact.

## **General Plan Update Program EIR**

The County of San Diego General Plan Update (GPU) establishes a blueprint for future land development in the unincorporated County that meets community desires and balances the environmental protection goals with the need for housing, agriculture, infrastructure, and economic vitality. The GPU applies to all of the unincorporated portions of San Diego County and directs population growth and plans for infrastructure needs, development, and resource protection. The GPU included adoption of new General Plan elements, which set the goals and policies that guide future development. It also included a corresponding land use map, a County Road Network map, updates to Community and Subregional Plans, an Implementation Plan, and other implementing policies and ordinances. The GPU focuses population growth in the western areas of the County where infrastructure and services are available in order to reduce the potential for growth in the eastern areas. The objectives of this population distribution strategy are to: 1) facilitate efficient, orderly growth by containing development within areas potentially served by the San Diego County Water Authority (SDCWA) or other existing infrastructure; 2) protect natural resources through the reduction of population capacity in sensitive areas; and 3) retain or enhance the character of communities within the unincorporated County. The SDCWA service area covers approximately the western one third of the unincorporated County. The SDWCA boundary generally represents where water and wastewater infrastructure currently exist. This area is more developed than the eastern areas of the unincorporated County, and would accommodate more growth under the GPU.

The GPU EIR was certified in conjunction with adoption of the GPU on August 3, 2011. The GPU EIR comprehensively evaluated environmental impacts that would result from Plan implementation, including information related to existing site conditions, analyses of the types and magnitude of project-level and cumulative environmental impacts, and feasible mitigation measures that could reduce or avoid environmental impacts.

## **Summary of Findings**

The Beebe Tentative Parcel Map is consistent with the analysis performed for the GPU EIR. Further, the GPU EIR adequately anticipated and described the impacts of the proposed project, identified applicable mitigation measures necessary to reduce project specific impacts, and the project implements these mitigation measures (see <a href="http://www.sdcounty.ca.gov/PDS/gpupdate/docs/BOS\_Aug2011/EIR/FEIR\_7.00">http://www.sdcounty.ca.gov/PDS/gpupdate/docs/BOS\_Aug2011/EIR/FEIR\_7.00</a> - Mitigation Measures 2011.pdf for complete list of GPU Mitigation Measures).

A comprehensive environmental evaluation has been completed for the project as documented in the attached §15183 Exemption Checklist. This evaluation concludes that the project qualifies for an exemption from additional environmental review because it is consistent with the development density and use characteristics established by the County of San Diego General Plan, as analyzed by the San Diego County General Plan Update Final Program EIR (GPU EIR, ER #02-ZA-001, SCH #2002111067), and all required findings can be made.

In accordance with CEQA Guidelines §15183, the project qualifies for an exemption because the following findings can be made:

- 1. The project is consistent with the development density established by existing zoning, community plan or general plan policies for which an EIR was certified.
  - The project would subdivide a 3.7-acre property into 2 lots, which is consistent with the Village development density established by the General Plan and the certified GPU EIR.
- 2. There are no project specific effects which are peculiar to the project or its site, and which the GPU EIR Failed to analyze as significant effects.

The subject property is no different than other properties in the surrounding area, and there are no project specific effects which are peculiar to the project or its site. The project site is located in an area developed with similarly sized, estate residential lots with associated accessory uses. The property does not support any peculiar environmental features, and the project would not result in any peculiar effects.

In addition, as explained further in the 15183 Checklist below, all project impacts were adequately analyzed by the GPU EIR. The project could result in potentially significant impacts to Agricultural resources. However, applicable mitigation measures specified within the GPU EIR have been made conditions of approval for this project.

3. There are no potentially significant off-site and/or cumulative impacts which the GPU EIR failed to evaluate.

The proposed project is consistent with the density and use characteristics of the development considered by the GPU EIR and would represent a small part of the growth that was forecast for build-out of the General Plan. The GPU EIR considered the incremental impacts of the proposed project, and as explained further in the 15183 Exemption Checklist below, no potentially significant off-site or cumulative impacts have been identified which were not previously evaluated.

4. There is no substantial new information which results in more severe impacts than anticipated by the GPU EIR.

As explained in the 15183 exemption checklist below, no new information has been identified which would result in a determination of a more severe impact than what had been anticipated by the GPU EIR.

5. The project will undertake feasible mitigation measures specified in the GPU EIR.

As explained in the 15183 exemption checklist below, the project will undertake feasible mitigation measures specified in the GPU EIR. These GPU EIR mitigation measures will be undertaken through project design, compliance with regulations and ordinances, or through the project's conditions of approval.

## **CEQA Guidelines §15183 Exemption Checklist**

#### Overview

This checklist provides an analysis of potential environmental impacts resulting from the proposed project. Following the format of CEQA Guidelines Appendix G, environmental effects are evaluated to determine if the project would result in a potentially significant impact triggering additional review under Guidelines section 15183.

- Items checked "Significant Project Impact" indicates that the project could result in a significant effect which either requires mitigation to be reduced to a less than significant level or which has a significant, unmitigated impact.
- Items checked "Impact not identified by GPU EIR" indicates the project would result in a
  project specific significant impact (peculiar off-site or cumulative that was not identified in
  the GPU EIR.
- Items checked "Substantial New Information" indicates that there is new information
  which leads to a determination that a project impact is more severe than what had been
  anticipated by the GPU EIR.

A project does not qualify for a §15183 exemption if it is determined that it would result in: 1) a peculiar impact that was not identified as a significant impact under the GPU EIR; 2) a more severe impact due to new information; or 3) a potentially significant off-site impact or cumulative impact not discussed in the GPU EIR.

A summary of staff's analysis of each potential environmental effect is provided below the checklist for each subject area. A list of references, significance guidelines, and technical studies used to support the analysis is attached in Appendix A. Appendix B contains a list of GPU EIR mitigation measures.

	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
<ul><li>1. AESTHETICS – Would the Project:</li><li>a) Have a substantial adverse effect on a scenic vista?</li></ul>			
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?			
c) Substantially degrade the existing visual character or quality of the site and its surroundings?			
d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?			
<b>Discussion</b> I(a) The project would be visible from public roads; how	ever, the si	te is not located v	within a

- viewshed of a scenic vista.
- 1(b) The property is not within the viewshed of a County or state scenic highway. The project site also does not support any significant scenic resources that would be lost or modified through development of the property.
- 1(c) The project would be consistent with existing community character. The project is located in an area characterized by residential uses. The addition of one new residential lot would not substantially degrade the visual quality of the site or its surroundings.
- Residential lighting would be required to conform with the County's Light Pollution Code 1(d) to prevent spillover onto adjacent properties and minimize impacts to dark skies.

As discussed above, the project would not result in any significant impacts to aesthetics; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

2. Agriculture/Forestry Resources	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
- Would the Project:			
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide or Local Importance as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, or other agricultural resources, to a non-agricultural use?			
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?			
c) Conflict with existing zoning for, or cause rezoning of,			

	•			
	land, timberland, or timberland zoned Timberland action?			
land to	sult in the loss of forest land, conversion of forest o non-forest use, or involve other changes in the ng environment, which, due to their location or e, could result in conversion of forest land to non-use?			
which conve	olve other changes in the existing environment, , due to their location or nature, could result in ersion of Important Farmland or other agricultural rces, to non-agricultural use?			
Discussion  2(a) The project site is designated as Prime Farmland, Farmland of Statewide Importance and Unique Farmland based on the State Farmland Mapping and Monitoring Program (FMMP), and the proposed project would convert the property into non-agricultural uses. To reduce the impact to less than significance, the impact would be mitigated at a 1:1 ratio through purchase of PACE credit or offsite agricultural easement. The proposed mitigation measure is consistent with GPU EIR mitigation measures Agr 1.2 and 1.4.				Program ral uses. at a 1:1 roposed
2(b)	The project site is not located within or adjacent agriculturally zoned land.	to a Willia	mson Act con	tract or
2(c)	There are no timberland production zones on or near	the property		
2(d)	The project site is not located near any forest lands.			
2(e) The southern portion of the site is located adjacent to a property that is designated as both Farmland of Statewide Importance and Unique Farmland. However, the project would not result in conversion of the existing agricultural use on the said property because the proposed building pad for the newly created parcel would be located in the northern portion of the project site. Therefore, the project would not result in changes in the existing environment and result in conversion of Important Farmland or other agricultural resources to non-agricultural use.			project property ed in the anges in	

As discussed above, the project would not result in any significant impacts to agricultural resources; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
3. Air Quality – Would the Project:	-		
a) Conflict with or obstruct implementation of the San			
Diego Regional Air Quality Strategy (RAQS) or applicable portions of the State Implementation Plan			
(SIP)?			

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?		
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?		
d) Expose sensitive receptors to substantial pollutant concentrations?		
e) Create objectionable odors affecting a substantial number of people?		

- 3(a) The project proposes development that was anticipated and considered by SANDAG growth projections used in development of the RAQS and SIP. As such, the project would not conflict with either the RAQS or the SIP. In addition, the operational emissions from the project are below screening levels, and will not violate any ambient air quality standards.
- 3(b) Grading operations associated with the construction of the project would be subject to the Grading Ordinance, which requires the implementation of dust control measures. Emissions from the construction phase would be minimal, temporary and localized, resulting in pollutant emissions below the screening level criteria established by County air quality guidelines for determining significance. In addition, the vehicle trips generated from the project will result in 12 Average Daily Trips (ADTs). According to the Bay Area Air Quality Management District CEQA Guidelines for Assessing the Air Quality Impacts of Projects and Plans, projects that generate less than 2,000 ADT are below the screening-level criteria established by the guidelines for criteria pollutants.
- 3(c) The project would contribute PM10, NOx, and VOCs emissions from construction/grading activities; however, the incremental increase would not exceed established screening thresholds (see question 3(b above)).
- 3(d) The project will introduce one additional residential home which is considered a new sensitive receptor; however, the project site is not located within a quarter-mile of any identified point source of significant emissions. Similarly, the project does not propose uses or activities that would result in exposure of these sensitive receptors to significant pollutant concentrations and will not place sensitive receptors near any carbon monoxide hotspots.
- 3(e) The project could produce objectionable odors during construction and operation; however, these substances, if present at all, would only be in trace amounts (less than 1 µg/m3).

#### Conclusion

As discussed above, the project would not result in any significant impacts to air quality; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

A. Biological Bosoness - Woodd the Brainste	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
<b>4. Biological Resources</b> – Would the Project:			
Have a substantial adverse effect, either directly or through habitat modifications, on any candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?			
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?			
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?			
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?			
e) Conflict with the provisions of any adopted Habitat Conservation Plan, Natural Communities Conservation Plan, other approved local, regional or state habitat conservation plan or any other local policies or ordinances that protect biological resources?			

- 4(a) Based on an analysis of the County's Geographic Information System (GIS) records, aerial imagery of the site, and site photos, it has been determined that no native vegetation communities or habitats exist on or adjacent to the site. The site has been historically cleared in accordance with Section 86.503(a)(7) of the Biological Mitigation Ordinance (BMO) which permits clearing of up to 10 acres on parcels containing a home prior to October 22, 1997. Based on these considerations, no direct and indirect impacts to sensitive natural communities supporting candidate, sensitive, or special status species would occur.
- 4(b) Based on an analysis of the County's GIS records, aerial imagery of the site, and site photos, it has been determined that the proposed project site does not contain any riparian habitat or other sensitive natural communities as defined by the County of San Diego Multiple Species Conservation Program (MSCP), County of San Diego Resource

Protection Ordinance (RPO), Natural Community Conservation Plan (NCCP), Fish and Wildlife Code, Endangered Species Act, Clean Water Act, or any other local or regional plans, policies or regulations. Therefore, the project will not have a substantial adverse effect on any riparian habitat or other sensitive natural community.

- 4(c) The proposed project site does not contain any wetlands as defined by Section 404 of the Clean Water Act, including, but not limited to, marsh, vernal pool, stream, lake, river or water of the U.S., that could potentially be impacted through direct removal, filling, hydrological interruption, diversion or obstruction by the proposed development. Therefore, no impacts will occur to wetlands defined by Section 404 of the Clean Water Act and under the jurisdiction of the Army Corps of Engineers.
- 4(d) Based on a GIS analysis, aerial imagery of the site, a site visit, and site photos, it has been determined that the site is not part of a regional linkage/corridor as identified on MSCP maps nor is it in an area considered regionally important for wildlife dispersal. The site would not assist in local wildlife movement as it lacks connecting vegetation and visual continuity with other potential habitat areas in the general project vicinity. Adjoining properties surrounding the project site are already developed with residential uses.
- 4(e) Please refer to the attached Ordinance Compliance Checklist for further information on consistency with any adopted Habitat Conservation Plan, Natural Communities Conservation Plan, other approved local, regional, or state habitat conservation plan, including Habitat Management Plans, Special Area Management Plans (SAMP), or any other local policies or ordinances that protect biological resources, including the Multiple Species Conservation Program (MSCP), Biological Mitigation Ordinance, Resource Protection Ordinance (RPO), and Habitat Loss Permit (HLP).

#### Conclusion

The project would not result in potentially significant impacts to biological resources; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

- 1. No peculiar impacts to the project or its site have been identified.
- 2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the GPU EIR.
- 3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the GPU EIR.
- 4. Feasible mitigation measures contained within the GPU EIR will be applied to the project.

5. Cultural Resources – Would the Project:	Significant	Impact not	Substantial
	Project	identified by	New
	Impact	GPU EIR	Information
a) Cause a substantial adverse change in the significance of a historical resource as defined in 15064.5?			

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to 15064.5?		
c) Directly or indirectly destroy a unique geologic feature?		
d) Directly or indirectly destroy a unique paleontological resource or site?		
e) Disturb any human remains, including those interred outside of formal cemeteries?		

- 5(a) Based on an analysis of County records as well as the database from the South Coastal Information Center, it has been determined that the project has been previously surveyed and is negative for historical resources. Therefore, it has been determined that there are no impacts to historical resources because they do not occur within the project site.
- 5(b) Based on an analysis of County records as well as the database from the South Coastal Information Center, it has been determined that the project has been previously surveyed and is negative for archaeological resources. Therefore, it has been determined that there are no impacts to archaeological resources because they do not occur within the project site.

Although no resources were identified during site surveys, the potential exists for subsurface deposits. Several recorded archaeological sites are located within the vicinity of the project.

As considered by the GPU EIR, potential impacts to cultural resources will be mitigated through ordinance compliance and through implementation of the following mitigation measures: grading monitoring under the supervision of a County-approved archaeologist and a Native American monitor and conformance with the County's Cultural Resource Guidelines if resources are encountered. The project will be conditioned with archaeological monitoring (Cul-2.5) that includes the following requirements:

#### Pre-Construction

 Pre-construction meeting to be attended by the Project Archaeologist and Luiseño Native American monitor to explain the monitoring requirements.

## Construction

- Monitoring: Both the Project Archaeologist and Luiseño Native American monitor are to be onsite during earth disturbing activities. The frequency and location of monitoring of native soils will be determined by the Project Archaeologist in consultation with the Luiseño Native American monitor. Both the Project Archaeologist and Luiseño Native American monitor will evaluate fill soils to ensure that they are negative for cultural resources
- If cultural resources are identified:
  - Both the Project Archaeologist and Luiseño Native American monitor have the authority to divert or temporarily halt ground disturbance operations in the area of the discovery.
  - The Project Archaeologist shall contact the County Archaeologist.

- The Project Archaeologist in consultation with the County Archaeologist and Luiseño Native American shall determine the significance of discovered resources.
- Construction activities will be allowed to resume after the County Archaeologist has concurred with the significance evaluation.
- Isolates and non-significant deposits shall be minimally documented in the field. Should the isolates and non-significant deposits not be collected by the Project Archaeologist, the Luiseño Native American monitor may collect the cultural material for transfer to a Tribal curation facility or repatriation program.
- If cultural resources are determined to be significant, a Research Design and Data Recovery Program shall be prepared by the Project Archaeologist in consultation with the Luiseño Native American monitor and approved by the County Archaeologist. The program shall include reasonable efforts to preserve (avoid) unique cultural resources of Sacred Sites; the capping of identified Sacred Sites or unique cultural resources and placement of development over the cap if avoidance is infeasible; and data recovery for non-unique cultural resources. The preferred option is preservation (avoidance).

#### Human Remains.

- The Property Owner or their representative shall contact the County Coroner and the PDS Staff Archaeologist.
- Upon identification of human remains, no further disturbance shall occur in the area of the find until the County Coroner has made the necessary findings as to origin.
- If the remains are determined to be of Native American origin, the Most Likely Descendant (MLD), as identified by the Native American Heritage Commission (NAHC), shall be contacted by the Property Owner or their representative in order to determine proper treatment and disposition of the remains.
- The immediate vicinity where the Native American human remains are located is not to be damaged or disturbed by further development activity until consultation with the MLD regarding their recommendations as required by Public Resources Code Section 5097.98 has been conducted.
- Public Resources Code §5097.98, CEQA §15064.5 and Health & Safety Code §7050.5 shall be followed in the event that human remains are discovered.

## Rough Grading

 Upon completion of Rough Grading, a monitoring report shall be prepared identifying whether resources were encountered. A copy of the monitoring report shall be provided to the San Luis Rey Band of Mission Indians, the Pala Band of Mission Indians, and any culturally-affiliated tribe who requests a copy.

## Final Grading

 A final report shall be prepared substantiating that earth-disturbing activities are completed and whether cultural resources were encountered. A copy of the final report shall be submitted to the South Coastal Information Center, the San Luis Rey Band of Mission Indians, the Pala Band of Mission Indians, and any culturally-affiliated tribe who requests a copy.

- Disposition of Cultural Material.
  - The final report shall include evidence that all prehistoric materials have been curated at a San Diego curation facility or Tribal curation facility that meets federal standards per 36 CFR Part 79, or alternatively have been repatriated to a culturally affiliated tribe.
  - The final report shall include evidence that all historic materials have been curated at a San Diego curation facility that meets federal standards per 36 CFR Part 79.

The Native American Heritage Commission (NAHC) was contacted for a listing of Native American Tribes whose ancestral lands may be impacted by the project. The Sacred Lands check conducted by the NAHC produced negative results. Tribal outreach was conducted with the listed tribes provided by the NAHC. Responses were received by Pala, San Luis Rey, Rincon, Soboba, and Pauma. No resources were identified; however, concerns included archaeological monitoring to include a Luiseño Native American monitor based on the potential for subsurface cultural resources. As such, monitoring will be made a condition of approval.

- 5(c) The site does not contain any unique geologic features that have been listed in the County's Guidelines for Determining Significance for Unique Geology Resources nor does the site support any known geologic characteristics that have the potential to support unique geologic features.
- 5(d) A review of the County's Paleontological Resources Maps and data on San Diego County's geologic formations indicates that the project is located on geological formations that do not contain unique paleontological resources.
  - As considered by the GPU EIR, potential impacts to paleontological resources will be mitigated through ordinance compliance and conformance with the County's Paleontological Resource Guidelines if resources are encountered.
- 5(e) Based on an analysis of records and archaeological surveys of the property, it has been determined that the project site does not include a formal cemetery or any archaeological resources that might contain interred human remains.

#### Conclusion

The project could result in potentially significant impacts to cultural resources; however, further environmental analysis is not required because:

- 1. No peculiar impacts to the project or its site have been identified.
- 2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the GPU EIR.
- 3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the GPU EIR.
- 4. Feasible mitigation measures contained within the GPU EIR will be applied to the project.

6. Geology and Soils – Would the Project:	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving: rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, liquefaction, and/or landslides?			
b) Result in substantial soil erosion or the loss of topsoil?			
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in an on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?			
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?			

- 6(a)(i) The project is not located in a fault rupture hazard zone identified by the Alquist-Priolo Earthquake Fault Zoning Act, Special Publication 42, Revised 1997, Fault-Rupture Hazards Zones in California, or located within any other area with substantial evidence of a known fault.
- 6(a)(ii) To ensure the structural integrity of all buildings and structures, the project must conform to the Seismic Requirements as outlined within the California Building Code. Compliance with the California Building Code and the County Building Code will ensure that the project will not result in a significant impact.
- 6(a)(iii) The project site is not within a "Potential Liquefaction Area" as identified in the County Guidelines for Determining Significance for Geologic Hazards.
- 6(a)(iv) The site is not located within a "Landslide Susceptibility Area" as identified in the County Guidelines for Determining Significance for Geologic Hazards.
- 6(b) According to the Soil Survey of San Diego County, the soils on-site are identified as Fallbrook sandy loam that has a soil erodibility rating of severe with moderate shrink-swell behavior and Placentia sandy loam, that has a erodibility rating of severe with high shrink-swell behavior. However, the project will not result in substantial soil erosion or the loss of topsoil because the project will be required to comply with the Watershed Protection Ordinance (WPO) and Grading Ordinance which will ensure that the project would not result in any unprotected erodible soils, will not alter existing

- drainage patters, and will not develop steep slopes. Additionally, the project will be required to implement Best Management Practices (BMPs) to prevent fugitive sediment.
- 6(c) The project is not located on or near geological formations that are unstable or would potentially become unstable as a result of the project.
- 6(d) The project is underlain by Fallbrook sandy loam and Placentia sandy loam, which are considered to be an expansive soil as defined within Table 18-I-B of the Uniform Building Code (1994). However, the project will not result in a significant impact because compliance with the Building Code and implementation of standard engineering techniques will ensure structural safety.
- 6(e) The project will rely on public water. One septic tank exists and one additional septic tanks is proposed. However, the location of the septic tank(s) and leach fields have been evaluated by the Department of Environmental Health and found to be acceptable with no adverse effects to any individual's health or safety.

As discussed above, the project would not result in any significant impacts to/from geology/soils; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

7. Greenhouse Gas Emissions – Would the Project:	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			

- 7(a) The project would produce GHG emissions through construction activities, vehicle trips, and residential fuel combustion; however, the project would not generate more than the 900 metric ton threshold established by the California Air Pollution Control Officer's Association (CAPCOA) white paper. Furthermore, projects that generate less than 900 metric tons of GHG will also participate in emission reductions because air emissions including GHGs are regulated either by the California Air Resources Control Board (CARB) the Federal Government, or other entities.
- 7(b) As described above, the project would not result in a cumulatively considerable contribution to global climate change. As such, the project would be consistent with County goals and policies included in the County General Plan that address greenhouse gas reductions. Therefore, the project would be consistent with emissions reduction targets of Assembly Bill 32, the Global Warming Solutions Act. Thus, the project would not conflict with any applicable plan, policy or regulation adopted for the purpose of reducing emissions of greenhouse gas emissions.

As discussed above, the project would not result in any significant impacts to greenhouse gas emissions; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
8. Hazards and Hazardous Materials – Would the Project:		33 0 ====	
a) Create a significant hazard to the public or the environment through the routine transport, storage, use, or disposal of hazardous materials or wastes or through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			
b) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			
c) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5, or is otherwise known to have been subject to a release of hazardous substances and, as a result, would it create a significant hazard to the public or the environment?			
d) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?			
e) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?			
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			
g)Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?			
h) Propose a use, or place residents adjacent to an existing or reasonably foreseeable use that would substantially increase current or future resident's exposure to vectors,			

including mosquitoes, rats or flies, which are capable of transmitting significant public health diseases or nuisances?

- 8(a) The project will not create a significant hazard to the public or the environment because it does not propose the storage, use, transport, emission, or disposal of Hazardous Substances, nor are Hazardous Substances proposed or currently in use in the immediate vicinity. In addition, the project does not propose to demolish any existing structures onsite which could produce a hazard related to the release of asbestos, lead based paint or other hazardous materials.
- 8(b) The project is not located within one-quarter mile of an existing or proposed school.
- 8(c) Based on a site visit and a comprehensive review of regulatory databases (see attached Hazards/Hazardous Materials references), the project site has not been subject to a release of hazardous substances. Additionally, the project does not propose structures for human occupancy or significant linear excavation within 1,000 feet of an open, abandoned, or closed landfill, is not located on or within 250 feet of the boundary of a parcel identified as containing burn ash (from the historic burning of trash), and is not on or within 1,000 feet of a Formerly Used Defense Site.
- 8(d) The proposed project is located within an Airport Land Use Compatibility Plan (ALUCP), an Airport Influence Area. However, it is not located within a Federal Aviation Administration Height Notification Surface. The project does not propose construction of any structure equal to or greater than 150 feet in height, constituting a safety hazard to aircraft and/or operations from an airport or heliport. In addition, the project is conditioned to include an overflight agreement across the property which indicates that the property is within an Airport Influence Area.
- 8(e) The proposed project is not within one mile of a private airstrip.
- 8(f)(i) OPERATIONAL AREA EMERGENCY PLAN AND MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN: The project will not interfere with this plan because it will not prohibit subsequent plans from being established or prevent the goals and objectives of existing plans from being carried out.
- 8(f)(ii) SAN DIEGO COUNTY NUCLEAR POWER STATION EMERGENCY RESPONSE PLAN: The property is not within the San Onofre emergency planning zone.
- 8(f)(iii) OIL SPILL CONTINGENCY ELEMENT: The project is not located along the coastal zone.
- 8(f)(iv) EMERGENCY WATER CONTINGENCIES ANNEX AND ENERGY SHORTAGE RESPONSE PLAN: The project would not alter major water or energy supply infrastructure which could interfere with the plan.
- 8f)(v) DAM EVACUATION PLAN: The project is not located within a dam inundation zone.
- 8(g) The proposed project is adjacent to wildlands that have the potential to support wildland fires. However, the project will not expose people or structures to a significant risk of loss, injury or death involving wildland fires because the project will comply with the

regulations relating to emergency access, water supply, and defensible space specified in the Consolidated Fire Code. Also, a Fire Service Availability Letter dated June 29, 2017 has been received from the North County Fire Protection District which indicates the expected emergency travel time to the project site to be 4 minutes, which is within the 5 minute maximum travel time allowed by the County Public Facilities Element.

6(h) The project does not involve or support uses that would allow water to stand for a period of 72 hours or more (e.g. artificial lakes, agricultural ponds). Also, the project does not involve or support uses that will produce or collect animal waste, such as equestrian facilities, agricultural operations (chicken coops, dairies etc.), solid waste facility or other similar uses. Moreover, based on a site visit conducted by County staff, there are none of these uses on adjacent properties.

#### Conclusion

As discussed above, the project would not result in any significant impacts to/from hazards/hazardous materials; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
9. Hydrology and Water Quality – Would the Project:			
a) Violate any waste discharge requirements?			
b) Is the project tributary to an already impaired water body, as listed on the Clean Water Act Section 303(d) list? If so, could the project result in an increase in any pollutant for which the water body is already impaired?			
c) Could the proposed project cause or contribute to an exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses?			
d) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?			
e) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?			
f) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in			

flooding on- or off-site?

g) Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems?		
h) Provide substantial additional sources of polluted runoff?		
i) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map, including County Floodplain Maps?		
j) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?		
k) Expose people or structures to a significant risk of loss, injury or death involving flooding?		
I) Expose people or structures to a significant risk of loss, injury or death involving flooding as a result of the failure of a levee or dam?		
m) Inundation by seiche, tsunami, or mudflow?		

- 9(a) The project will require a NPDES General Permit for Discharges of Storm Water Associated with Construction Activities. The project applicant has provided a Stormwater Management Plan (SWMP) which demonstrates that the project will comply with all requirements of the WPO. The project will be required to implement site design measures, source control BMPs, and/or treatment control BMPs to reduce potential pollutants to the maximum extent practicable. These measures will enable the project to meet waste discharge requirements as required by the San Diego Municipal Permit, as implemented by the San Diego County Jurisdictional Urban Runoff Management Program (JURMP) and Standard Urban Storm Water Mitigation Plan (SUSMP).
- 9(b) The project lies in the Bonsall (903.12) hydrologic subareas, within the San Luis Rey hydrologic unit. According to the Clean Water Act Section 303(d) list, a portion of this watershed is impaired for pollutants/stressors. Constituents of concern in the Lower San Luis Rey watershed include coliform bacteria, nutrients, sediment, lowered dissolve oxygen, and trace metals. The project could contribute to release of these pollutants; however, the project will comply with the WPO and implement site design measures, source control BMPs, and treatment control BMPs to prevent a significant increase of pollutants to receiving waters.
- 9(c) As stated in responses 9(a) and 9(b) above, implementation of BMPs and compliance with required ordinances will ensure that project impacts are less than significant.
- 9(d) The project will obtain its water supply from the Fallbrook Public Utility District that obtains water from surface reservoirs or other imported sources. The project will not use

- any groundwater. In addition, the project does not involve operations that would interfere substantially with groundwater recharge.
- 9(e) As outlined in the project's SWMP, the project will implement source control and/or treatment control BMP's to reduce potential pollutants, including sediment from erosion or siltation, to the maximum extent practicable from entering storm water runoff.
- 9(f) The project will not significantly alter established drainage patterns or significantly increase the amount of runoff for the following reasons: based on a Drainage Study prepared by GAC Engineering, March 6, 2017, drainage will be conveyed to either natural drainage channels or approved drainage facilities.
- 9(g) The project does not propose to create or contribute runoff water that would exceed the capacity of existing or planned storm water drainage systems.
- 9(h) The project has the potential to generate pollutants; however, site design measures, source control BMPs, and treatment control BMPs will be employed such that potential pollutants will be reduced to the maximum extent practicable.
- 9(i) The project site contains drainage swales, which are identified as being 100-year flood hazard areas. However, the project is not proposing to place structures with a potential for human occupation within these areas and will not place access roads or other improvements which will limit access during flood events or affect downstream properties.
- 9(j) The project site contains drainage swales, which are identified as being 100-year flood hazard areas. However, the project is not proposing to place structures, access roads or other improvements which will impede or redirect flood flows in these areas.
- 9(k) The project site contains drainage swales, which are identified as being 100-year flood hazard areas. However, the project is not proposing to place structures, access roads or other improvements which will impede or redirect flood flows in these areas.
- 9(I) The project site lies outside a mapped dam inundation area for a major dam/reservoir within San Diego County. In addition, the project is not located immediately downstream of a minor dam that could potentially flood the property.
- 9(m)(i) SEICHE: The project site is not located along the shoreline of a lake or reservoir.
- 9(m)(ii) TSUNAMI: The project site is not located in a tsunami hazard zone.
- 9(m)(iii) MUDFLOW: Mudflow is type of landslide. See response to question 6(a)(iv).

As discussed above, the project would not result in any significant impacts to/from hydrology/water quality; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

As discussed above, the project would not result in any significant impacts to mineral resources; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

Impact Sensitive Land Use Designation (24) with an Extractive Land Use Overlay (25).

	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
12. Noise – Would the Project:	<b>F</b>		
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?			
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?			
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?			
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?			

12(a) Noise information was prepared and demonstrated that the project would not expose people to potentially significant noise levels that exceed the allowable limits of the General Plan, Noise Ordinance, or other applicable standards for the following reasons:

General Plan – The project is subject to the County Noise Element which requires an exterior noise level threshold of 60 dBA CNEL for single family residences. The project is a two parcel subdivision located in the Fallbrook Community Plan area. The site is located adjacent to the Morro Road and Palomino Road intersection. Based on the location of the project, the nearby roadways are not anticipated to expose the project to future traffic levels exceeding the 60 dBA CNEL threshold requirement. This is due to noise attenuation by distance, roadway segments screen by intervening topography, and screening from rows of existing homes/structures. Additionally, low level ADT from nearby roadways would expose the project site to less than significant traffic noise. Based on these existing site features, staff does not anticipate noise levels to exceed County noise standards. Additionally, the project related traffic contributions to nearby roadways would not create any off-site direct and/or cumulative noise impacts. General Plan Noise Element conformance is demonstrated.

- 21 -

Noise Ordinance – Section 36-404: Non-transportation noise generated by the project is not expected to exceed the standards of the Noise Ordinance at or beyond the project's property line. The project does not involve any permanent noise producing equipment that would exceed applicable noise levels at the adjoining property line.

Noise Ordinance – Section 36-409 & 36-310:

The project is also subject to temporary construction noise requirements. The County Noise Ordinance, Section 36.409 allows an eight-hour average 75 dBA sound level limit at the boundary of an occupied structure for the operations of construction equipment. Although existing residences are currently surrounding the site to the north, east, and west, all grading will take place in one single phase not to exceed seven working days. No blasting and no drilling activities are proposed. Equipment anticipated are comprised of a mini-excavator and dozer. The construction equipment operations would also be conditioned to comply with the County Noise Ordinance not to exceed the 75 dBA eight-hour average sound level requirement. Additionally, the project is a minor two parcel subdivision with general construction equipment for grading that would not result in any substantial impulsive noise impacts.

12(b) The project proposes residences where low ambient vibration is essential for interior operation and/or sleeping conditions. However, the facilities are typically setback more than 50 feet from any County Mobility Element (ME) roadway using rubber-tired vehicles with projected groundborne noise or vibration contours of 38 VdB or less; any property line for parcels zoned industrial or extractive use; or any permitted extractive uses. A setback of 50 feet from the roadway centerline for heavy-duty truck activities would insure that these proposed uses or operations do not have any chance of being impacted significantly by groundborne vibration or groundborne noise levels (Harris, Miller Miller and Hanson Inc., Transit Noise and Vibration Impact Assessment 1995, Rudy Hendriks, Transportation Related Earthborne Vibrations 2002). This setback insures that this project site will not be affected by any future projects that may support sources of groundborne vibration or groundborne noise related to the adjacent roadways.

Also, the project does not propose any major, new or expanded infrastructure such as mass transit, highways or major roadways or intensive extractive industry that could generate excessive groundborne vibration or groundborne noise levels and impact vibration sensitive uses in the surrounding area.

Therefore, the project will not expose persons to or generate excessive groundborne vibration or groundborne noise levels on a project or cumulative level.

- 12(c) As indicated in the response listed under Section 12(a), the project would not expose existing or planned noise sensitive areas in the vicinity to a substantial permanent increase in noise levels that exceed the allowable limits of any applicable noise standards. Also, the project is not expected to expose existing or planned noise sensitive areas to noise 10 dB CNEL over existing ambient noise levels.
- 12(d) The project does not involve any operational uses that may create substantial temporary or periodic increases in ambient noise levels in the project vicinity. Also, general construction noise is not expected to exceed the construction noise limits of the Noise Ordinance. Construction operations will occur only during permitted hours of operation. Also, the project will not operate construction equipment in excess of 75 dB for more than 8 hours during a 24 hour period.

- 12(e) The project is located within 2 miles of a public airport or public use airport (Fallbrook Airport). Based on the Fallbrook Airport Land Use Compatibility Plan (ALUCP), the project falls outside of the 60 dBA CNEL over flight noise contour and would not be exposed to substantial airport related noise impacts.
- 12(f) The project is not located within a one-mile vicinity of a private airstrip.

The project could result in potentially significant impacts related to noise; however, further environmental analysis is not required because:

- 1. No peculiar impacts to the project or its site have been identified.
- 2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the GPU EIR.
- 3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the GPU EIR.
- 4. Feasible mitigation measures contained within the GPU EIR under Noi-4.1 and 4.2 will be applied to the project as notes on the grading plan Mitigation measures Noi-5.1 has been applied as it relates to Airport Land Use Compatibility Plans.

13. Population and Housing – Would the Project:	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?			
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?			

- 13(a) The project will not induce substantial population growth in an area because the project does not propose any physical or regulatory change that would remove a restriction to or encourage population growth in an area.
- 13(b) The project will not displace existing housing.
- 13(c) The proposed project will not displace a substantial number of people since the site proposes one additional parcel and the existing home would remain.

As discussed above, the project would not result in any significant impacts to populations/housing; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

<b>14. Public Services</b> – Would the Project:	Significant	Impact not	Substantial
	Project	identified by	New
	Impact	GPU EIR	Information
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance service ratios for fire protection, police protection, schools, parks, or other public facilities?			

## **Discussion**

14(a) Based on the project's service availability forms, the project would not result in the need for significantly altered services or facilities.

#### Conclusion

As discussed above, the project would not result in any significant impacts to public services; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

15. Recreation – Would the Project:	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?			

- 15(a) The project would incrementally increase the use of existing parks and other recreational facilities; however, the project will be required to pay fees or dedicate land for local parks pursuant to the Park Land Dedication Ordinance.
- 15(b) The project includes trails and/or pathways. Impacts from these amenities have been considered as part of the overall environmental analysis contained elsewhere in this document.

As discussed above, the project would not result in any significant impacts to recreation; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

<b>16. Transportation and Traffic</b> – Would the Project:	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
a) Conflict with an applicable plan, ordinance or policy establishing measures of the effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths and mass transit?			
b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?			
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?			
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			
e) Result in inadequate emergency access?			
f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?			

- 16(a) The project will result in an additional 12 ADT. However, the project will not conflict with any established performance measures because the project trips do not exceed the thresholds established by County guidelines. In addition, the project would not conflict with policies related to non-motorized travel such as mass transit, pedestrian or bicycle facilities
- 16(b) The additional 12 ADTs from the project do not exceed the 2400 trips (or 200 peak hour trips) required for study under the region's Congestion Management Program as developed by SANDAG.

- 16(c) The proposed project is located within an Airport Influence Area, and has been conditioned to add an Overflight Agreement against the property. The project would not result in any changes to air traffic patterns since the height of future development is regulated by the Zoning Ordinance.
- 16(d) The proposed project will not alter traffic patterns, roadway design, place incompatible uses (e.g., farm equipment) on existing roadways, or create curves, slopes or walls which would impede adequate sight distance on a road.
- 16(e) The North County Fire Protection District and the San Diego County Fire Authority have reviewed the project and its Fire Protection Plan and have determined that there is adequate emergency fire access.
- 16(f) The project will not result in the construction of any road improvements or new road design features that would interfere with the provision of public transit, bicycle or pedestrian facilities. In addition, the project does not generate sufficient travel demand to increase demand for transit, pedestrian or bicycle facilities.

As discussed above, the project would not result in any significant impacts to transportation/traffic; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.

	Significant Project Impact	Impact not identified by GPU EIR	Substantial New Information
<b>17. Utilities and Service Systems</b> – Would the Project:	•		
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?			
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?			
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?			
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?			
e) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			

f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?		
g) Comply with federal, state, and local statutes and regulations related to solid waste?		

- 17(a) The project would discharge domestic waste to individual septic systems that is permitted to operate by the Regional Water Quality Control Board (RWQCB). The project has been reviewed by the County Department of Environmental Health which indicates that there is adequate capacity to serve the project.
- 17(b) The project involves new water and wastewater pipeline extensions. However, these extensions will not result in additional adverse physical effects beyond those already identified in other sections of this environmental analysis.
- 17(c) The project involves new storm water drainage facilities. However, these extensions will not result in additional adverse physical effects beyond those already identified in other sections of this environmental analysis.
- 17(d) A Service Availability Letter from the Fallbrook Public Utility District has been provided which indicates that there is adequate water to serve the project.
- 17(e) The project would not utilize sewer, as the project is designed for individual septic systems for each parcel. The Department of Environmental Health has reviewed and accepted the Septic Layout design.
- 17(f) All solid waste facilities, including landfills require solid waste facility permits to operate. There are five, permitted active landfills in San Diego County with remaining capacity to adequately serve the project.
- 17(g) The project will deposit all solid waste at a permitted solid waste facility.

#### Conclusion

As discussed above, the project would not result in any significant impacts to utilities and service systems; therefore, the project would not result in an impact which was not adequately evaluated by the GPU EIR.
